

Deep Dive | Judges

Washington, DC
June 2019

General Case Management

Pending/Draft Orders

- Currently sees “unfinished business” - new filings and anything that hasn’t been forwarded or completed - but doesn’t track pending orders, etc. ([#2041](#))

Trial Session Cases

- Can’t currently see cases by trial session - only has list of cases assigned to him with new filings and then can search for cases ([#1272](#))
- Would want to be able to sort list of pending cases, by status (set for trial) and trial date, filed by date, last action taken, due date, place of trial ([#1932 Filter trial sessions](#))

Petitioner Crosscheck

- Nice to know if another case exists with the same petitioner - if you have one year and another judge has another year, etc. ([new story- post-MVP](#))
-

General Case Management

Case Notes

- Notes from one judge should be visible to future judges when cases are continued (if judge elects to make these notes public) - ([#1281](#) & [#338](#))

Document Header

- Header - date filed, document no (index #), docket number, possibly petitioner last name, page # (needs to be a page # that won't change if a new cover sheet is generated (new story?))

Orders

Order Generation

- Simple Order Generation -wants to click a button to say i want to issue an order for this thing (#437)
- Order templates should only be populated with the date once it is served by docket (currently there's a "signed on" date on the order that they don't need and could be confusing to petitioners)
(add to #1921)

Draft Orders

- Difficult to see that a draft order has already been created, and sometimes he will duplicate the order (related to #1942; new story for viewing/tracking draft documents?)

Pending Due Dates

- Chambers admin has "shared task" in Outlook to track pending due dates for orders, etc. - this isn't easily found in the actual system (add to #2041)

Trial Session Planning Workspace

Required Information ([add to #1272](#))

- Docket, Caption, Counsel, Disposition, if Pre-Trial Memo was received, expected outcome (definite trial, etc.), if conference call is needed, judge's notes
- Ability to tag cases with categories
- Ability to filter cases by outcome, and manipulate the order of the cases in the report
- Ability to expand/collapse information to see more cases at one time
 - Need to add notes that apply to the entire trial session
 - Need to add notes that apply to a specific case (conference call notes, important dates, etc.)
 - Need to be able to easily navigate between cases on a trial session, documents within a single case, and notes for that case
 - Ability to share worksheet within the chambers
 - Ability to hide cases that have been settled

Trial Session Planning Workspace

Other Information ([new story - supplemental information](#))

- Tax Year/ Amount
- Timeliness of Petition
- Description of what is in the petition
- Any continuances
- “Main Issue”
- Ability to draw, add handwritten notes (nice to have)

Pre- Trial Memo ([new story - pre-trial memo metadata](#))

- Most important piece of info on the memo is the expected outcome (trial, settlement, etc.)
- Would be nice if some of the standard info on the memo be entered as metadata so they would not need to look at the actual document for the general info

Printable Trial Session Worksheet ([new story - print optimized session worksheet](#))

- Need a printable version of the trial session worksheet - with all notes
- Ability to print all cases, or just active

Trials

Calendar Call

- Need access to the list of cases they have previously prepared ([solved by #1272](#))
- List of cases should be sortable by docket number (default), petitioner counsel, and possibly respondent counsel ([add to #1272](#))
- Ability to take notes (most are handwritten but could have the ability to enter these into the system at some point) ([#1280](#))
- Trial schedule - should be noted in the calendar call minutes so it is easily accessible ([add to #318](#))
- Would be great to be able to scan in the stipulation document while on-site ([equipment dependent; post-MVP](#))
- Notes taken during calendar call do not go into system; would be beneficial to retain notes taken before and during trial session ([add ability to add notes throughout trial session to #1280](#))

Trials

Submissions

- Exhibits are submitted - would like these to be accepted electronically ([business decision, post-MVP](#))

Bench Opinions ([add story for bench opinion process](#))

- Generally an offline process - could be a way to improve the editing process after court reporter creates the transcript
- Would be nice to electronically make edit to the bench opinion transcript - need to be able to see the changes (original and edits)
- Draft opinions do not need to be in the system, but if they could be only visible within a chambers, that could be part of the system

Trials

Post-Trial

- Need visibility into all of his pending cases (pre- and post-trial session) (#1932 and add to dashboard story)
- Need visibility into cases that have settled (but are not yet closed) (#1272 & #1932)
- Ability to track pending briefs (due dates provided during the trial, should be in minutes sheet) (related to #2041; new story possible)
- Need ability to view previous trial sessions (no limit) (add to #1912)
- Want to build out more modular templates to use consistent language for documents with standard elements (Nice to have) (post-MVP)

Trial Clerk Duties

- Need deep dive with Trial Clerk - minutes, tracking exhibits (new story UX Research)
- Trial clerk needs to ability to check if an attorney is admitted while at a trial session - must validate this before judge accept their entry (new story post MVP)

Dashboard

“My Assigned Cases”

- Need access to all cases assigned to judge, including cases assigned to trial session and the “other cases assigned to you” ([new story](#), [judge’s dashboard](#))

New Filings ([new story](#), [judge’s dashboard](#))

- Need to see all new incoming filings for all their cases - doesn’t really matter if it has been QC’d yet or not, as long as there is an indicator that it needs to be QC’d
- Who sent a message isn’t important (does not help prioritize)
- Info for new filing: Docket number, caption, place of trial, date filed, document, status

Notifications

- Needs notification on new filings on his cases - currently it doesn’t tell him how many filings have come in ([new story](#), [judge’s dashboard](#))
- Need notification/visibility into cases where actions are needed (pending) ([#2041](#) or [new story](#))
- Currently sees “unfinished business” - new filings and anything that hasn’t been forwarded or completed - but doesn’t track pending orders, etc. ([#2041](#) or [new story](#))

Questions | Come on, let us have 'em!
